

# Solar power generation Solar energy is converted into

## Overview

---

Solar technologies convert sunlight into electrical energy either through photovoltaic (PV) panels or through mirrors that concentrate solar radiation. Below, you can find resources and information on the. Solar radiation may be converted directly into solar power (electricity) by solar cells, or photovoltaic cells. In such cells, a small electric voltage is generated when light strikes the junction between a metal and a semiconductor (such as silicon) or the junction between two different. The first three concentrated solar power (CSP) units of Spain's Solnova Solar Power Station in the foreground, with the PS10 and PS20 solar power towers in the background Solar power, also known as solar electricity, is the conversion of energy from sunlight into electricity, either directly using. Solar energy is harnessed through photovoltaic panels that convert sunlight directly into electricity. These panels, made up of solar cells, capture particles of light called photons, which then interact with the cells to generate an electric current. These photons contain varying amounts of.
