

Solar power generation and hydropower transformation drawings

Solar power generation and hydropower transformation drawings

The flow of water produces hydroelectricity.

Falling water produces hydroelectric power. The theory is to build a dam on a large river that has a large drop in elevation (there are not many hydroelectric plants in Kansas or Florida).

How Hydropower Works

Hydropower, or hydroelectric power, is a renewable source of energy that generates power by using a dam or diversion structure to alter the natural flow of a river or other body of water.

Hydroelectric power generation diagram [9]

Hydro turbine is one of the important components in hydropower plants, which makes mechanical power from the available hydro potential and is used to drive the generator to generate electricity.
