

Solar-powered containerized oil platform

Overview

These rugged, self-contained systems integrate large solar arrays, advanced battery storage, and high-capacity fuel cells — with optional diesel redundancy when regulatory or client requirements demand it. Sarawak Shell, a subsidiary of the UK-headquartered energy giant Shell, is setting all the puzzle pieces together to kick off production from a natural gas development off the coast of Malaysia. The latest milestone in this project comes with the jacket and topside sail-away events for an offshore. Unmanned offshore rigs, often called autonomous or robotic rigs, are becoming increasingly prevalent in the oil and gas industry due to technological advancements and the desire to reduce operational costs and enhance safety. Additionally, the container has been equipped with dual certifications. Gorek, which achieved first gas in May 2020, is Shell's first fully solar energy-powered platform offshore Malaysia. Powered by wind and solar systems, Shell's new Timi wellhead platform has produced first gas offshore Malaysia, the company said in a recent announcement. In addition to custom design, we offer a range of standard free-standing kits from 100-1100W. As the global push for renewable energy intensifies, oil and gas companies are increasingly exploring solutions to transition from fossil fuels to more sustainable. Motive Renewable Power Solutions were initially designed for unmanned platforms in the offshore oil and gas sector as an alternative to traditional diesel generators.

Solar-powered containerized oil platform

Off-grid solar-powered containerized mobile oil platform

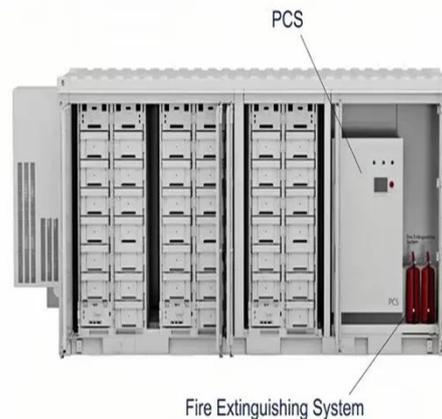

modular design for easy additional solar power capacity. Customize your container according to various configurations, power outputs, and storage capacity according to your needs. Lower your ...
