

Solar thermal energy cape verde

Overview

The project—built by Aguas de Ponta Preta—is one of several aimed at reducing fossil fuel dependence and stabilizing energy costs. The new 5 MW solar array in Santa Maria, Sal Island, marks a significant step in the country's ambitious push to expand its renewable energy capacity. As of 2016, 176,743 tonnes of fuel (about 3,550 barrels per day) were sold on the internal market. 4% from. shed a goal to achieve 100% of its electricity from renewable sources by 2025. Several islands in the archipelago have suitable wind and solar resources and nationally these compose about 25% of the electricity output. However, not all islands are equally endowed with these resources and the lack. Cape Verde has inaugurated its largest solar PV plant to date, set to produce more than 10GW annually for the island archipelago nation off the West African coast.

Energy in Cape Verde

Cape Verde aims to get 50% of its electricity from renewable energy resources by 2030 and 100% by 2050. This coincides with aims to bring down energy import costs and help the environment by reducing greenhouse gas emissions. The country has integrated wind and solar in its energy system. It also has the potential to utilize emerging technologies as ocean thermal energy conversion. A 26 MWh grid battery started at a wind farm in 2025.
