

# The **BATTERY** light on the PV inverter is not on

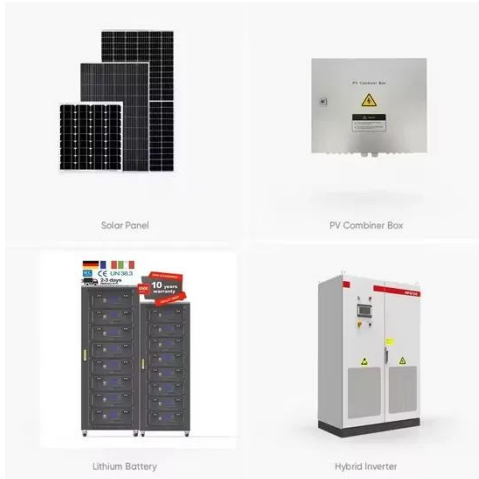

## Overview

---

Pressing the reset button usually fixes most inverter problems. If that does not work, the battery may be low and needs to be recharged. "Inverter won't turn on" means the LCD of the inverter is blank, the LEDs above the LCD are not working at all, and the inverter is not generating power. PV inverters are powered by DC (solar). If your home is running on solar power, there are two ways to reset an. The solar charger is unresponsive The solar charger is unresponsive (inactive) if the display is not illuminated, there is no charging activity, and it is not communicating with the VictronConnect app via Bluetooth or the VE. Before beginning any work, carefully read all safety instructions, and always observe them when working on or with the inverter. The installation must follow all applicable national g future operation and maintenance. This guide helps you immediately troubleshoot the most common We'll dive deep into the top 10 solar inverter failure codes and issues, providing clear DIY troubleshooting steps and critical advice. Solar inverter problems can cause performance dips, system outages, and even long-term damage to your setup if left unaddressed.

## Inverter is On But Not Working - Solved

The Inverter Needs A Reset  
Weak Battery  
Loose Wiring  
Defective device/appliance  
System Overload  
If the inverter is on but unable to carry any load, the battery might be weak. Forcing an inverter to run with low battery power can be disastrous. An inverter that is connected to a battery bank depends on the battery for power. If the capacity is too low, the inverter will not be able to run its load. The solution is to charge the battery. If you See more on portablesolarexpert
