

# The cost of photovoltaic panels connected to the grid

## Overview

---

Grid-tied solar dominates the market for good reason: With 2025 system costs ranging from \$2.00 per watt installed and federal tax credits of 30% through 2032, grid-tied systems offer the fastest payback periods (6-10 years) and highest returns on investment without requiring expensive. Each year, the U.S. Department of Energy (DOE) Solar Energy Technologies Office (SETO) and its national laboratory partners analyze cost data for U.S. These benchmarks help measure progress toward goals for reducing solar electricity costs. NREL analyzes the total costs associated with installing photovoltaic (PV) systems for residential rooftop, commercial rooftop, and utility-scale ground-mount systems. This work has grown to include cost models for solar-plus-storage systems. Your actual cost depends on your home's energy needs, roof characteristics, location and other factors, all of which we'll break down in. With Unbound Solar's pre-wired grid-tie systems you'll be able to see what components are needed for your system and a ballpark figure of what you might expect to pay.

### Solar Panel Cost in 2026: Everything

## You Need to Know , Fixr

On average, solar systems cost about \$3.04 per watt, though larger systems often have a lower cost per watt. You can use the table below to estimate total costs based on different system ...
