

The crisis of solar power

Overview

As global demand for renewable energy reaches new heights, the solar energy industry is struggling with shortages, delays, and disruptions triggered by a combination of climate change, supply chain issues, and infrastructure limitations. The US residential solar industry may now be on the brink of collapse. Recent observations have sparked alarm among scientists and experts regarding our electric grid's precarious state. The occurrence of X8-class solar flares signals that America's reliance on electricity has made us alarmingly. In recent years, Texas has experienced severe weather events that have exposed vulnerabilities in its energy grid. In light of these challenges.

The momentum of the solar energy transition

We focus on identifying the existence of a tipping point for solar and wind, assuming that no further policy is adopted to usher in a solar and wind-

dominated electricity system.
