TRIANGLE FLAT ROOF SYSTEM

## Overview

---

The panels contain no motors, fans, or moving components that could generate noise. This process happens. Inverter fans can become noisy if the fan motor becomes worn due to overuse, when the load placed on the inverter is too high, or when the temperature in the inverter remains too high despite the fan running at full speed. But when your photovoltaic system's external fan starts sounding like a garage band practicing punk rock at 3 AM, you've got an abnormal sound from the external fan of the photovoltaic panel situation. Before you start Googling "exorcism for solar equipment," let's break down what's really happenin. Solar panels themselves don't have moving parts — so homeowners are often surprised when they hear a buzzing, humming, or vibrating sound coming from their solar system. The noise may be: Most homeowners assume the sound is normal. Sometimes it is — but many times, it isn't.

## The external fan of the photovoltaic panel is abnormally noisy

---

### Causes of abnormal external fan of photovoltaic panels

In this case, the external fan is abnormal. The solution: (1) Check the running status of the fan on site, and use tools to move the fan blades to remove foreign objects; (2) Use tools such as hair
