

The first solar power station generates electricity

Overview

Solar power was first discovered by French physicist Edmond Becquerel in 1839 at the young age of 19. At the time, Becquerel was experimenting in his father's lab when he observed the photovoltaic effect, a process that generates electricity when exposed to sunlight. In 1913, the Egyptians constructed the world's first solar power plant. More than a century later, solar power plant construction has come a long way, but just how has solar power plant construction progressed?

In 1913 Maadi, Egypt, Frank Shuman's "Sun Shine Power Company" harnessed the power of. In 1876, William Grylls Adams and his student Richard Day discovered that when Selenium (Se) was exposed to light, it produced electricity. While it wasn't perfect, it was the first step towards the energy revolution — proving that sunlight itself could be converted into usable electricity. His process involved placing.

The first solar power station generates electricity

The History of Solar Energy

1883 -- Charles Fritts develops the first solar cell using selenium coated with gold, though it is less than 1% effective in turning solar energy into electricity.
