

The photovoltaic panel has changed color Does it mean it is broken

Overview

Solar panel discoloration is typically the result of long-term exposure to the elements, such as sunlight, rain, and dust. This issue may affect the aesthetic appearance of the panels, but it does not generally impact their functionality or efficiency. However, severe discoloration could. While maintaining your solar panel system you may notice some discoloration. Understanding these issues can help you identify and address them promptly. Let's explore the most common types of solar panel discoloration: One of the most noticeable forms. Solar panel discoloration can occur due to various factors, including degradation, hot spots, EVA degradation, and backsheet deterioration, impacting the panel's performance and efficiency. Let's break down what's happening on your roof and, more importantly, what we can do about it.

The photovoltaic panel has changed color Does it mean it is broken

One Solar Panel Looks Different

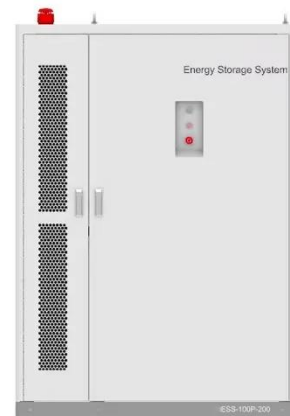

If one solar panel looks brighter or darker than the others, it may signal wiring, shading, or cell damage. Learn what the visual changes mean and how to fix them.
