Communication base station outdoor environment is harsh, affected by temperature and humidity, especially as the special properties of the base station power supply, the performance of the energy storage lithium battery plays a vital role in the stability. Communication base station outdoor environment is harsh, affected by temperature and humidity, especially as the special properties of the base station power supply, the performance of the energy storage lithium battery plays a vital role in the stability. In the communication power supply field, base station interruptions may occur due to sudden natural disasters or unstable power supplies. This work studies the optimization of battery resource configurations to cope with the duration uncertainty of base station interruption. The energy storage of base station has the potential to promote frequency stability as the construction of the 5G base station. These batteries store energy, support load balancing, and enhance the resilience of communication infrastructure. Understanding how these systems operate is essential for stakeholders aiming to optimize network performance and sustainability. Explore the 2025 Communication Base Station Energy. Intelligent energy storage lithium battery can effectively protect the base station battery in the event of the accidental short circuit, lightning shock, and other conditions, timely start the protection system to provide a safe and stable backup power supply for the entire base station. 45V output meets RRU equipment.
