

The solar bracket is too thin and deformed

Overview

The design is too thin, lack of sufficient wind resistance or insufficient structural strength, unreasonable arrangement of support points, etc. may lead to cracks, deformation or even fall off when the bracket is subjected to external forces such as wind and snow pressure. A thorough understanding of the problem, coupled with the appropriate tools and techniques, ensures that the brackets function optimally. Regular maintenance not only helps in. In this blog, I'll share some tips on how to troubleshoot issues with adjustable solar brackets. This includes cracks, bends, or any. Solar bracket are usually made of carbon steel, but in the process of processing, installation or use, the coating on the surface may be damaged, exposing the underlying steel and increasing the risk of rust. Assess structural integrity, 2. Follow detailed installation guidelines, 4. Ensure proper alignment and spacing. One crucial aspect is to thoroughly evaluate the.
