

# Tilt of photovoltaic support

## Overview

---

Tilt is the vertical angle of your solar panels relative to the horizontal ground. A panel lying flat has a  $0^\circ$  tilt, while a panel mounted vertically has a  $90^\circ$  tilt. The purpose of tilting the array is to adjust for the sun's height in the sky, which varies by latitude and season. Snow & Rain Factor: In colder regions, steeper tilts are better. To maximize a solar array's output, the optimal pv azimuth and tilt angle must be precisely calculated. However, this is just a baseline. True performance. She knows in depth RatedPower's digital solution to reduce the LCOE and maximise the productivity of large-scale photovoltaic plants. Learn how tilt and spacing decisions influence roof loads, racking systems, and engineering costs.
