

# Use a magnifying glass to illuminate photovoltaic panels to generate electricity

## Overview

---

A magnifying glass does not create electricity. While it cannot directly create electricity, a magnifying glass can be used to concentrate sunlight to produce heat or thermal energy. Can the two be combined to boost the energy production from a solar panel?

It is not possible to use Magnifying Glass On A Solar Panel because concentrating light on a solar panel with a magnifying glass. A magnifying glass acts as a simple but surprisingly powerful tool for channeling solar energy into usable heat. People have come up with all sorts of practical and experimental uses for this trick. A magnifying glass doesn't. You've probably wondered: "If magnifying glasses amplify light, why don't we use them to boost solar panel output?"

" Well, the answer's more complex than you might think. Let's cut through the hype and examine the real science behind light concentration in photovoltaics.
