

What electricity does the French power station use

Overview

Energy in France is generated from five primary sources: coal, natural gas, liquid fuels, nuclear power, and renewables. 5 TWh in 2019 and a total electricity production of 537. 67%, [2] the highest percentage in the world. This target was delayed in 2019 to 2035. France has successfully connected its most powerful nuclear reactor – the Flamanville 3 European Pressurized Reactor – to the national electricity grid. France's electricity exports to Belgium and Germany increased the most, but France also exported more electricity to Spain, Switzerland, the United Kingdom, and Italy. This shows the share of the different sources of electricity in 2023 in France (expressed as a percentage).
