

# What is a single-glass photovoltaic panel

## Overview

---

### What is a Single Glass Solar Panel?

For years, single glass panels—often referred to as monofacial solar panels—have been a mainstay in the solar energy sector. It serves as a barrier that shields the solar cells from external elements while allowing sunlight to pass. These panels collect reflected light from the back of the panel as well as direct light from the front. Instead of an opaque backing film, they have a glass back. An example is right above my head as I write this. These panels are lighter, more affordable, and suitable for most residential rooftops.

### Single Glass and Double Glass Solar Panels: An In-Depth Comparison

Single glass solar panels are affordable and cheaper than double glass solar panels, therefore they are available in the market easily and more in quantity than double glass panels.

### Single vs. double glass solar panels - which is better?

These have 1.6 mm thick glass panels at the front and back. Single glass solar panels typically feature a 3.2mm film on the front and a back made of a polymer material such as PVA.
