

# What is the glue sheet of photovoltaic laminator

## Overview

---

EVA (Ethylene Vinyl Acetate) hot melt adhesive sheets are a form of thermoplastic glue that softens when heated and solidifies when cooled, resulting in strong connections between materials. In the solar industry, ethylene-vinyl acetate (EVA) film is widely used to encase. That's why those solar module makers need our flexible, resilient, and durable silicone membrane sheets specially designed for use in solar laminators to provide compression on the photovoltaic panels in repeated cycle life. This machine uses heat and pressure to stick different layers of the photovoltaic module together. This brand new material gives users many benefits including :

Technical Data: It has an EVA resistant fluorine laminated surface with additional fabric. erties that are designed for solar energy companies. With technological advances, the. (full name: silicone sheet for photovoltaic module laminator) Solar silicone sheet (silicone rubber sheet for photovoltaic module laminator) is a customized high-temperature resistant silicone sheet whose thickness can be adjusted according to process requirements.

### Silicone Membrane Sheet For Solar PV Modules Lamination

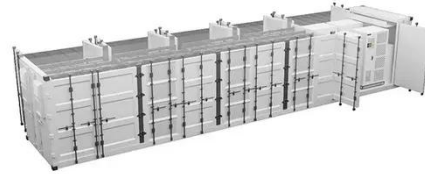

To give extended life in a solar panel laminator, a layer of PTFE coated fiberglass fabric sheet between the modules and the membrane is often suggested. Usually thickness can be 0.25mm or 0.35mm.
