

# What is the lithium battery of energy storage device

## Overview

---

A lithium-ion battery or Li-ion battery is a type of rechargeable battery that uses the reversible intercalation of  $\text{Li}^+$  ions into electronically conducting solids to store energy. The rechargeable battery was invented in 1859 with a lead-acid chemistry that is still. As a result of the lithium-ion battery adoption, solar and wind energy can be stored, and this increases the reliability and accessibility of renewable energy. These batteries are designed to store and release energy efficiently, making them an excellent choice for various applications, from powering.
