

What is under the photovoltaic panel

Overview

At a high level, solar panels are made up of solar cells, which absorb sunlight. They use this sunlight to create direct current (DC) electricity through a process called "the photovoltaic effect. The most crucial component of the solar panels is the photovoltaic (PV) cells. Solar panels are not a single functional element, but modules composed of multiple structural units. Each component plays a distinct role in optical protection, electrical energy conversion, mechanical support, and electrical connection. But what exactly makes up a solar PV system?

Let us look closer into the essential parts of a solar photovoltaic system, breaking down each component and explaining how they work together to bring clean.

What is under the photovoltaic panel

Photovoltaic cell

The photovoltaic effect is a process that generates voltage or electric current in a photovoltaic cell when it is exposed to sunlight. These solar cells are composed of two different types of semiconductors ...

How do solar panels work? Solar power explained

At a high level, solar panels are made up of solar cells, which absorb sunlight. They use this sunlight to create direct current (DC) electricity through a process called "the photovoltaic effect."

[Get Price](#)

- LiFePO₄
- Wide temp: -20°C to 55°C
- Easy to expand
- Floor mount&wall mount
- Intelligent BMS
- Cycle Life:≥6000
- Warranty :10 years

Components for Your Solar Panel (Photovoltaic) System

In PV system terminology, everything besides the PV modules themselves is called "balance of system" or BOS. We'll go over the main BOS components below, one at a time, in the direction of electricity ...
