

# What medicinal herbs can be planted under photovoltaic panels

- ✓ 100KWH/215KWH
- ✓ LIQUID/AIR COOLING
- ✓ IP54/IP55
- ✓ BATTERY 6000 CYCLES

## Overview

---

In this article, I will delve into the principles, applications, and outcomes of growing medicinal plants like *Pinellia ternata* and *Acorus calamus* under photovoltaic arrays, drawing from practical implementations to illustrate the potential of this innovative system. The agrivoltaic model leverages medicinal herbs that can be grown under photovoltaic arrays to address increased food insecurity and energy demand. Agrivoltaics is the utilization of sunlight for both plant production and solar energy, which reduces evaporative loss of soil moisture in a dryland area. This isn't science fiction - it's the cutting edge of agrivoltaics, where solar energy production meets agricultural. Many leafy greens and root vegetables benefit from cooler temperatures and filtered sunlight, making them perfect for Agrivoltaics: Leafy Greens - Lettuce, spinach, kale, Swiss chard. Root Vegetables - Carrots, radishes, beets, turnips. Research in the APV increased its light use efficiency, photosynthetic rate, and root biomass by increasing its height, electron transfer flux, and up-regulating a photosystem I protein (PsaA).
