

# What to do when it rains while installing photovoltaic panels

## Overview

---

Water can pose a risk to solar panels over time, especially during heavy rain or monsoons. A watertight installation prevents leaks that could damage the wiring or hardware underneath. Consider sealants or waterproofing solutions to protect vulnerable areas and maintain the safety of. Australian solar industry professionals agree that while rain can help, it is only a partial solution. While light rain can remove loose dust from the panels, the rain typically does not remove the bonded dirt or debris, such as pollution residue, bird droppings, salt spray, and construction dust. But don't be disheartened! To make an informed decision, understanding the risks, benefits, and best practices is crucial. This article will provide you with all the details you need. Installing. If you're worried about extreme weather affecting your solar system's performance, there are several things you can do before and after your installation to ensure everything can operate as safely and efficiently as possible. To help maximize your investment in renewable energy, this guide outlines. Solar panels work by converting sunlight into electricity using photovoltaic cells.
