

Where in the world is solar power generation

Overview

The top five countries are China, United States, India, Japan, and Germany, based on solar power generation and installed capacity. Photovoltaic (PV) systems use solar panels, either on rooftops or in ground-mounted solar farms, converting sunlight directly into electric power. Concentrated solar power (CSP, also known as "concentrated solar thermal") plants use solar thermal energy to make steam, that is thereafter converted. Values displayed in megawatts (MW), a unit of measurement equivalent to 1 million watts (or 1,000 kilowatts). Solar power is. Welcome to Global Solar Atlas v2. Start exploring solar potential by clicking on the map. Calculate energy production for selected sites. In 2025, solar power is the cornerstone. Ember (2026); Energy Institute - Statistical Review of World Energy (2025) - with major processing by Our World in Data This dataset contains yearly electricity generation, capacity, emissions, imports and demand data for European countries.

Where in the world is solar power generation

Solar power generation, 2025

This dataset contains yearly electricity generation, capacity, emissions, import and demand data for over 200 geographies. You can find more about Ember's methodology in this ...
