

# Which photovoltaic aluminum alloy bracket is better

## Overview

---

Aluminum alloy profiles are lighter in weight, more beautiful in appearance, and have better anti-corrosion properties. ), the effect of using aluminum alloy brackets. Photovoltaic brackets select suitable profiles according to specific load-bearing requirements. In contrast, steel offers superior strength and is often more cost-effective initially. However, steel is susceptible to rust unless adequately treated. This guide will help you understand two critical decisions: black anodized vs standard anodized aluminum and the difference between 6005-T6 and 6060-T6 alloys for. With global solar capacity projected to reach 4. Deflection and cost□ The deflection deformation of the structure is related to the shape and size of the profile, the modulus of elasticity (an inherent parameter of the material), but not directly related to the strength of the.

## Which photovoltaic aluminum alloy bracket is better

---

### How to choose a solar photovoltaic bracket

From the above analysis, it can be known that the aluminum alloy profile photovoltaic bracket is currently the most popular in the market in terms of comprehensive performance.
