

# Which photovoltaic panel factory is installed

## Overview

---

This map provides information about all of the solar photovoltaic (PV) manufacturing facilities in the United States and how they contribute to the solar supply chain. It details their nameplate capacities, or the full amount of potential output at an existing facility, where known. 7 GW in 2007, to 320 GW in 2016. It's a surprising new product launch for a business that Tesla has seemingly been dismantling for the last two years. According to the US Department of Energy, in Q1 of 2025, the US installed a capacity of 10. Texas and Florida recorded. The Inflation Reduction Act (IRA) of 2022 played a key role in this transformation, offering tax credits and financial incentives to companies that manufacture solar components in the U.
