Overview

In a series connection, solar panels are linked end to end. This adds up their voltage while the current (amps) stays the same. When you connect the positive terminal of one panel to the negative terminal of another. This section will go into more depth on series, parallel and series-parallel connections of solar panels. The purpose of this section is to explain why certain connections are utilized, how to set up to your desired connection, as well as going over what is the most beneficial connection to utilize. When solar panels are connected in series they charge fast, and this increases their power wattage. You can do that one of two ways (or a hybrid of both).
