

Why solar power loses money

Overview

We'll walk you through 12 critical reasons your solar panels might not be saving you money, from technical system issues to billing complications, plus give you a step-by-step action plan to maximize your solar savings in 2025. Net metering policy changes are reducing returns: Many states. Private equity investments follow a predictable financial pattern known as the J-curve, where portfolio values initially decline before ascending to profitability—a phenomenon critically important for solar photovoltaic project financing. During the early stages, investors experience negative. People who are unsure about how solar power works sometimes think that when you have a solar PV system installed, you have to use every last drop of energy the panels generate—while it's being generated—or all the excess power will be lost. Actually the truth is just the opposite. Worldwide, 2024 was a difficult year for the residential solar market. 7 billion in capital investments. The deployment of these systems is only the first step in the effort to control and reduce energy costs. In light of a recent story about an Ontario homeowner who spent \$50,000 on solar panels and now saves only \$100 a month, Brightworks Energy's CEO, Bobby MacCannell, shares his perspective on what went wrong—and how homeowners can protect themselves before signing a solar contract.
