

# Will solar panels generate electricity when they are not generating electricity

## Overview

---

When there's no sunlight, solar panels can't generate electricity. This highlights the importance of solar backup batteries to guarantee a continuous power supply even when there's no sunlight. But, what happens if a solar panel is not connected?

In this blog, we will discuss its consequences and understand if it is ok to leave it disconnected. While solar panels are designed to capture sunlight and convert it into electrical energy, they don't necessarily require direct sunlight to do so. These photons contain varying amounts of.
