

Will the current of the off-grid inverter flow back to the grid

Overview

Any inverter that is UL 1741 compliant is designed for anti-islanding. When you power it on, you'll have to wait about 5 minutes while it evaluates the grid. If it's a true grid tie inverter, it won't run without grid input. Can excess PV be fed directly into the grid using an inverter?

Or is it necessary to go through a "middle man" like a battery, and. It's a device that converts direct current (DC) electricity, which is what a solar panel generates, to alternating current (AC) electricity, which the electrical grid uses.
