

# Wind turbine follow-up system

## Overview

---

The Wind Turbine Monitoring System sets the standard for precision, reliability, and performance in turbine monitoring technology, providing operators with the insights they need to optimise turbine performance and maximise operational efficiency. Specifically designed for wind turbines, our condition monitoring software uses real-time data to quickly pinpoint the root cause of an issue. This shift is driven by two major factors: many wind turbine warranties are expiring—exposing owners to the true operations and maintenance costs of wind farms, and component failures are driving excessive maintenance costs.

## Understanding Wind Turbine Condition Monitoring Systems

For wind turbines, the recommendation comes in the form of a maintenance action that will be required. If a bearing is faulted, the recommendation could be to verify the fault through visual inspection within ...
