

Yerevan energy storage policy updates

Overview

Armenia's recent approval of the Yerevan battery energy storage power station isn't just local news - it's part of a \$36 billion global push for grid-scale storage. Think of it like adding a giant "power bank" to stabilize renewable energy. The event was co-hosted by STREACS (Strengthening Research in Armenia for Energy Transition toward Climate Solutions), an EU-funded project led by the AUA Acopian Center for the Environment, in partnership with R2E2 and the World Bank. Energy storage, including behind-the-meter small-scale energy. Why should Armenia start thinking about battery storage now?

As Armenia works towards the Government's ambitious renewable energy targets and the share of variable renewable generation increases, the country might need to install battery storage systems to ensure the reliable and smooth operation. Key government priorities include promoting maximum use of the country's potential for renewable energy and energy efficiency; increasing power transmission links with Armenia's neighbours; gradually liberalising the domestic electricity market; and maintaining and, possibly, increasing the role. Imagine a power station that not only generates clean energy but also stores sunshine for nighttime use. That's exactly what the Yerevan project achieves, combining 80MW photovoltaic panels with a 120MWh lithium-ion battery system. As Armenia targets 30% renewable energy by 2030, this facility. The Government of Armenia is looking to launch an energy storage program leading to the development of the first pilot storage projects in the country.
